## MORE ABOUT DENTISTRY

### **WHAT IS THE DIFFERENCE BETWEEN COSMETIC AND LASER DENTISTRY?**

Cosmetic dentistry is generally used to refer to any dental work that improves the appearance (though not necessarily the functionality) of teeth,

Lasers can be used as a safe and effective treatment for a wide range of dental procedures and are often used in conjunction with other dental instruments.

### **WHY TO VISIT THE DENTIST ON REGULAR BASIS?**

Many people do not see a dentist on a regular basis. They only go when they have a problem. This is known as "crisis treatment" versus "preventive treatment."

Many dental problems do not have symptoms until they reach the advanced stages of the disease process.

### **WHY DOES THE DENTIST TAKE X-RAYS**

Many diseases of the teeth and surrounding tissues cannot be seen when the dentist examines the mouth. An X-ray examination may reveal:

- 1-Small areas of decay between the teeth or below existing
- 2-Restorations (fillings)
- 3-Infections in the bone
- 4-Periodontal (gum) disease
- 5-Abscesses or cysts
- 6-Developmental abnormalities
- 7-Some types of tumors
